

Ariel D. Walters

Senior Integrations Engineer | Full Stack | Node.js / TypeScript | Healthcare Technology

New Orleans, LA · arieldwalters4@gmail.com · Remote

SUMMARY

Software engineer with 13 years of experience designing and delivering business-critical integrations, APIs, and data pipelines in compliance-sensitive, enterprise environments. Deep background in Node.js/TypeScript, REST APIs, OAuth2.0, and cross-organizational technical partnerships. Proven ability to work autonomously at startup pace while collaborating tightly with product, implementation, and external stakeholders. Passionate about the intersection of AI and healthcare—and the real-world impact of getting integrations right for clinicians and patients.

CORE SKILLS

Integrations & APIs: REST APIs · OAuth2.0 · Webhook Architecture · Batch & Real-time Data Pipelines · Third-party API Integrations · FHIR (learning)

Languages & Stack: Node.js · TypeScript · React · JavaScript · SQL · Python

Cloud & Infra: AWS (primary) · GCP · Cloud-native Architecture · CI/CD · Security & Privacy Compliance

Collaboration: Enterprise Stakeholder Management · Technical Documentation · Cross-functional Delivery · Agile/Scrum · Async-first Teams

PROFESSIONAL EXPERIENCE

Software Engineer & Technical Consultant

Independent — Remote | 2020–Present

- Designed, built, and delivered integrations and data-driven platforms for startup and nonprofit clients—owning API contracts, data schemas, and third-party service connections end-to-end.
- Implemented OAuth2.0 authentication flows and REST API integrations across multiple client-facing and internal-facing products, ensuring secure data exchange between systems.
- Led technical discovery with external stakeholders to define integration requirements, map data flows, and align on rollout timelines—bridging the gap between business needs and engineering execution.
- Produced integration documentation, runbooks, and onboarding guides adopted as standards by client engineering teams.
- Mentored engineers on API design, async patterns, and integration testing best practices.

Key Impact: Delivered a client-facing visibility platform end-to-end—from stakeholder discovery through third-party integrations and launch—directly increasing user adoption and enabling organizational scale.

Senior Software Engineer

Eaze Technologies — Remote | 2020–2022

- Core engineer on Adit, an internal ACH transaction platform built with tight integrations across payment processors, compliance systems, and operational tooling—handling sensitive financial data in a regulated environment.
- Built and maintained real-time and batch data pipelines integrating inventory, operations, and financial systems across multiple states.
- Collaborated directly with product managers, compliance, and operations stakeholders to translate business rules into secure, auditable integration logic.
- Reduced manual data workflows by 80%+ through automation and system-to-system integrations, improving data reliability and team throughput.
- Authored integration documentation and testing protocols adopted across three teams; served as integration SME for onboarding new engineers.

Key Impact: Delivered integrations powering multi-state expansion into Michigan; documentation strategy standardized integration processes across three teams.

Software Engineer

Whetstone Education — New Orleans, LA | 2017–2018

- Built full-stack data systems and analytics dashboards with integrations serving 140+ K–12 school districts—ingesting, transforming, and surfacing structured data from multiple source systems.
- Led development of the company’s flagship “Super Dashboard,” requiring reliable data integrations and real-time aggregation pipelines across district-level systems at scale.
- Worked closely with external district partners during deployment and troubleshooting, gaining direct experience supporting integrations with enterprise customers.

Key Impact: Designed and launched a data integration and analytics platform from scratch that supported a major company growth phase and expanded the customer base significantly.

Software Engineer

BAE Systems — Fort Worth, TX | 2014–2016 The Boeing Company — Oklahoma City, OK | 2013–2014

- Built and maintained high-reliability software in compliance-driven, highly regulated environments—developing a foundational discipline in security, documentation rigor, and change management.
- Participated in change control boards and risk mitigation processes, building experience with the operational discipline required in safety-critical systems—directly applicable to healthcare integrations.

EDUCATION

Executive MBA — Tulane University, 2020

B.S. Computer Engineering — Jackson State University, 2013

CAREER NOTE

Took intentional career pauses (2018–2020, 2022–2024) following the birth of my children. Continued consulting, mentoring engineers, and staying current with evolving API standards and integration patterns during these periods.
